## OBJECTIVE

Passionate B.E. Computer Science & Engineering (IoT) student (CGPA: 8.56) with hands-on experience across full-stack development (MERN), embedded IoT systems (ESP32, MQTT, ThingSpeak), and foundational AI/ML (Deep Learning, Computer Vision, NLP), backed by 15+ industry certifications. Seeking a Software Development/AI-ML internship to apply strong problem-solving skills and project experience toward building impactful, real-world solutions.

## EDUCATION

|                                                                                                                                                                  |                                  |
|------------------------------------------------------------------------------------------------------------------------------------------------------------------|----------------------------------|
| <b>B.E. Computer Science &amp; Engineering (Internet of Things)</b>                                                                                              | Aug 2024 – May 2028              |
| K.S.R. College of Engineering, Coimbatore, Tamil Nadu                                                                                                            | CGPA: 8.56 / 10.0 (till 3rd Sem) |
| <i>Relevant Coursework: Data Structures &amp; Algorithms, Database Management, Object-Oriented Programming, IoT Systems, Computer Networks, Embedded Systems</i> |                                  |
| <b>Higher Secondary (Class XII) – CBSE</b>                                                                                                                       | June 2024                        |
| Lisieux CMI Public School, Coimbatore                                                                                                                            | Grade: 81.8%                     |

## TECHNICAL SKILLS

|                                                                                                                                  |
|----------------------------------------------------------------------------------------------------------------------------------|
| <b>Languages:</b> Python, Java, C, SQL                                                                                           |
| <b>Web Technologies:</b> HTML5, CSS3                                                                                             |
| <b>Core Concepts:</b> Data Structures & Algorithms (DSA), Object-Oriented Programming                                            |
| <b>IoT &amp; Embedded:</b> ESP32, Arduino, MQTT Protocol, ThingSpeak, Blynk, IoT Sensor Integration, Cloud Dashboard Integration |
| <b>Data &amp; Analytics:</b> Pandas, NumPy, Matplotlib                                                                           |
| <b>AI / ML:</b> Deep Learning, Computer Vision, NLP, Generative AI, Prompt Engineering                                           |
| <b>Tools &amp; Platforms:</b> Git, GitHub, MATLAB, VS Code                                                                       |

## PROJECTS

|                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         |

| 2026: Agile Scrum in Practice, AI Primer, Artificial Intelligence, Computer Vision, Data Science, Deep Learning, Deep Learning for Developers, Generative AI Unleashing, Generative Models for Developers, Introduction to OpenAI GPT Models, NLP, OpenAI GPT, Principles of Generative AI, Prompt Engineering, Robotic Process Automation. |
| 2025: Python Programming.                                                                                                                                                                                                                                                                                                                   |

2024: C Programming.

#### **Virtual Internship Experience (Forage)**

- Deloitte Australia – Cyber Security Job Simulation: Investigated security vulnerabilities, created threat models, and recommended mitigation strategies (2026).
- Deloitte Australia – Data Analysis Job Simulation: Cleaned and analysed datasets using Excel and Tableau, built dashboards to surface business insights (2026).
- Deloitte Australia – Technology Consulting Job Simulation: Mapped business processes and drafted technology transformation proposals for a client scenario (2026).
- Tata Group – Data Visualisation: Empowering Business with Effective Insights (2026).
- Tata Group – GenAI Data Analytics Job Simulation (2026).

#### **Other Certifications**

- HTML Certificate – Great Learning (2024)
- MATLAB: Onramp, Calculations on Grouped Data, Clean and Prepare Data for Analysis – MathWorks (2024 & 2026)

### **HACKATHONS, CO-CURRICULARS & ACHIEVEMENTS**

---

#### **Hackathons**

- Participant – SDG Hackathon, K.S.R. College of Engineering: Developed a solution addressing a UN Sustainable Development Goal in a competitive team environment.
- Participant – Odoo x KAHE Virtual Hackathon: Collaborated on an ERP-integrated application challenge.
- Participant – IBM Dev Day Bob Edition Virtual Hackathon: Engaged with IBM Cloud technologies in a developer challenge.

#### **NCC (National Cadet Corps)**

- Represented at IASC-2025 (State Level Camp), Tambaram – selected among top cadets statewide.
- Represented at AIVSC-2025 (All India Vayu Sainik Camp), Bangalore – National level NCC selection, demonstrating leadership, discipline, and teamwork.
